Personal Profile

Fourth-year BS Computer Science student and DOST-SEI scholar at the University of the Philippines Tacloban College. Currently developing MantaNet, a multi-task CNN framework for deep-sea object detection and semantic segmentation, as my undergraduate thesis. Experienced in full-stack web development across production codebases, including backend work on a logistics ERP at MYT SoftDev Solutions and a React portal for the Municipality of Hilongos, with additional background in applied deep learning using PyTorch. Seeking a software engineering role where I can contribute to backend or applied ML work on real systems.

Education

2023 – Present: BS in Computer Science

University of the Philippines Tacloban College

- **Awards:** DOST SEI Scholar
- **Relevant Coursework:** Data Structures and Algorithms, Machine Learning, Artificial Intelligence, Computer Vision, Software Engineering, Linear Algebra, Probability and Statistics, Research in Computer Science.

2017 – 2023: High School

Philippine Science High School

- **Relevant Coursework:** Computer Science, Calculus, Statistics, Physics, Research I–III, Capstone Research Project.

Experience

Software Engineer Intern | 2026

MYT SoftDev Solutions

- Developed backend features for a full-stack logistics ERP (CodeIgniter 4 + React) serving a trucking business, including contract route management modules
- Designed and documented the database layer: authored an ERD and a full data dictionary covering 23 tables
- Managed schema migrations and database export/import workflows across local and shared hosting environments
- Followed conventional commit standards and Git-based team workflows on a production codebase

Projects

Hilongos Service Management System (HL-SMS) | 2026

Municipality of Hilongos, Leyte

- **Role:** Frontend Developer
- **Description:** Built the React-based web portal for Hilongos' municipal service management system, covering both the resident-facing booking experience and the internal staff workflow for 12 municipal office
- **Key Achievements:** Designed a no-account, multi-step appointment booking flow with reference-code tracking; implemented the end-to-end service request lifecycle UI; developed a typo-tolerant fuzzy search engine
- **Skills Applied:** React 19, Vite, Tailwind CSS, React Router, TanStack React Query, REST API integration, UI/UX design, responsive design, component architecture

General Laboratory Item Management System | 2025

University of the Philippines Tacloban College

- **Role:** Frontend Developer
- **Description:** Engineered a comprehensive Java-based desktop application for managing laboratory equipment and materials at University of the Philippines Tacloban
- **Key Achievements:** Streamlined inventory tracking processes for multiple laboratory departments, implemented robust database architecture for equipment categorization and availability monitoring

- **Skills Applied:** Frontend development, UI/UX, team coordination, project management, software architecture

CoachTzy | 2025

University of the Philippines Tacloban College

- **Role:** Full-Stack Developer
- **Description:** Engineered a complete web application for competitive team management with draft simulation and performance analytics
- **Key Achievements:** Implemented secure authentication system, designed responsive multi-page dashboard, created robust database architecture for players, teams, and match data
- **Skills Applied:** Full-stack web development, Supabase, JavaScript, database design, UI/UX

Snek n Laderz | 2024

University of the Philippines Tacloban College

- **Role:** Full-Stack Developer
- **Description:** Developed a Java-based desktop board game application with advanced graphics rendering and interactive gameplay mechanics using Java Swing.
- **Key Achievements:** Architected scalable multi-player framework with animated movement system, custom board rendering, dice rolling mechanics, and win detection logic.
- **Skills Applied:** Java Swing GUI development, OOP, Multithreading, Event-driven architecture, Team collaboration

Thesis

MantaNet: A Multicolor Space CNN-Based Multi-Task Framework for Deep-Sea Detection and Segmentation | Ongoing

University of the Philippines Tacloban College

- **Description:** Developed a CNN-based multi-task framework that jointly performs object detection and semantic segmentation on deep-sea imagery using a multicolor space input representation.
- **Key Achievements:** Built a unified architecture with a shared backbone and dual task-specific heads, curated pixel-level segmentation masks for the dataset, and demonstrated measurable performance gains from multi-task learning over single-task baselines.
- **Skills Applied:** Deep learning, computer vision, multi-task learning, PyTorch, model training and evaluation, technical research writing.

Certifications

Career Service Examination - Pen and Paper Test (Professional Level) | March 2026
